"Expand into an ethnobotanical exploration of sound waves, folk, ambient, reggae and more! From the coffee blues to psychedelic interpretations of enchanted flowers, enjoy six alchemical compilations of nature inspired music.

Over the last three years I've been creating these plant playlists, mostly for my own pleasure. In a past life I sang in an all female psychedelic post-punk band in New York and Europe. Making these compilations combines my love of music and nature. Look out for a song by my band. Here's a hint! The album title has a botanical name."
